Summary

IncomeShares WTI Oil+ Yield ETP dynamically allocates between directly investing in WTI Oil ETFs and selling put options on it, capturing intrinsic and extrinsic value. The aim is to generate high monthly income while retaining upside exposure to the underlying asset. The ETP also earns a return on uninvested cash and may mitigate downside.

Strategy

Single Stock Exposure + **Selling 'Cash-Covered' Put options** = **Income Potential**

Key Benefits

- **Income Generation**

  Monthly income from selling cash-secured put options and earning a return on uninvested cash.
- **Upside Participation**

  Maintains 25% direct stock exposure, providing uncapped participation on a portion of the portfolio.
- **Downside Cushion**

  Income generated from option premiums may help cushion against market downturns.

Key Risks

- While premium income can help offset declines, the ETP may still incur losses if the underlying security falls sharply.
- The strategy provides only partial upside participation as a large portion of the assets is held in cash.
- Please see the ‘Risks Factors’ section of the base prospectus of Leverage Shares plc relevant to an investor’s jurisdiction (the “Relevant Prospectus”) for a more detailed discussion of the potential risks associated with an investment in this product.

Risk Warnings

The value of an investment in ETPs may go down as well as up and past performance is not a reliable indicator of future performance. An investment in ETPs is dependent on the performance of the underlying index, less costs, but it is not expected to match that performance precisely. ETPs offering daily leveraged or daily short exposures (“Leveraged ETPs”) are products which feature specific risks that prospective investors should understand before investing in them.

Securities issued by the Issuer are products involving a significant degree of risk and may not be suitable for all types of investor. Any decision to invest should be based on the information contained in the Relevant Prospectus of the Issuer (or any supplements thereto) which includes, inter alia, information on certain risks associated with an investment. The price of any securities may go up or down and an investor may not get back the amount invested. Securities are priced in US Dollars/Euros/Pounds and the value of the investment in other currencies will be affected by exchange rate movements.

Short and leveraged exchange-traded products are only intended for investors who understand the risks involved in investing in a product with short and/or leveraged exposure and who intend to invest on a short-term basis. Any investment in short and/or leveraged products should be monitored on a daily basis to ensure consistency with your investment strategy. You should understand that investments in short and/or leveraged exchange-traded products held for a period of longer than one day may not provide returns equivalent to the return from the relevant unleveraged investment multiplied by the relevant leverage factor.

Potential losses in short and/or leveraged exchange-traded products may be magnified in comparison to investments that do not incorporate these strategies. Please refer to the section entitled “Risk Factors” in the relevant prospectus for further details of these and other risks associated with an investment in short and/or leveraged exchange traded products. You should consult an independent investment adviser prior to making an investment in short and/or leveraged exchange-traded products in order to determine its suitability to your circumstances.
